HS-3 Heater Stat

Reduce Energy Cost
Cold Weather Temperature Controlled Electrical Thermostat Outlet.

ON 35°F

OFF 45°F

The HS-3 Heater-Stat is an temperature controlled electrical thermostat outlet. Designed to automatically turn on and off electrical devices when the ambient temperature drops or raises in accordance with a preset temperature setting, the HS-3 is the ideal device to control the operation of the Oil Pan Heater and Battery Warmer or Block Heater.

The HS-3 plugs into an outdoor 120 volt AC electrical outlet and has two 120 volt receptacles. The maximum electrical load is 1800 watts; this will accommodate the largest oil pan heater (1000 watt, model 80) and BH-60 battery warmer to be plugged in and operate simultaneously.

The oil pan heater and the battery warmer will be automatically turned on when the ambient temperature falls below 35°F (2°C) and stay on and until the ambient temperature exceeds 45°F (10°C). This reduces electrical usage and energy cost.

Specifications

Maximum rating 1800 watts, 15 amps AC
