

# TITAN Heaters

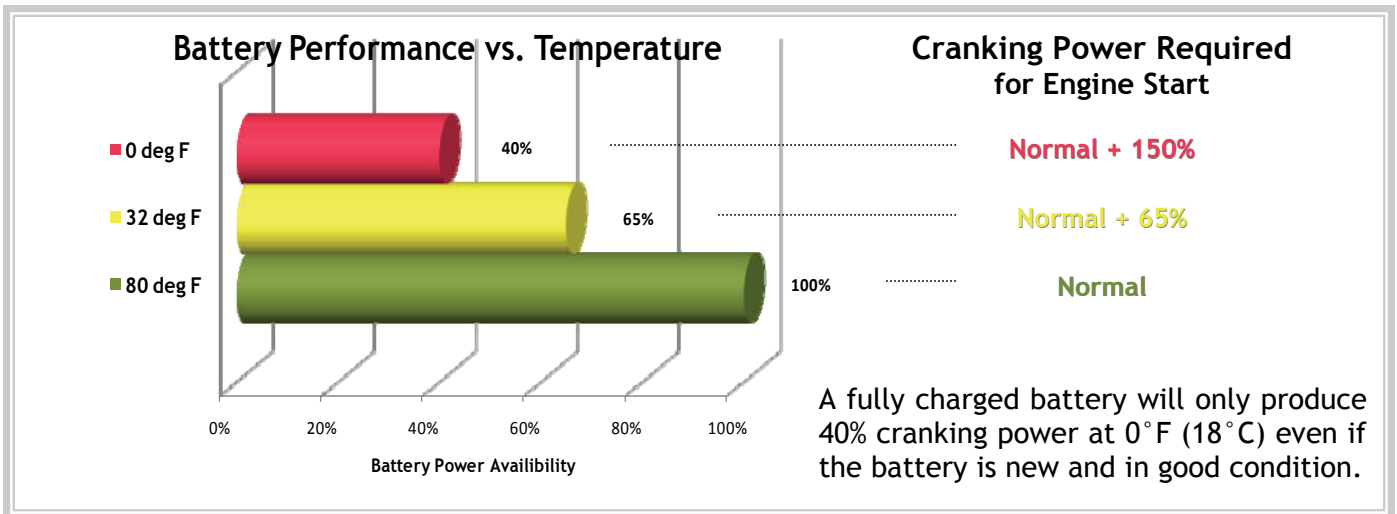

Reliable Heating Solutions

## THB60 Battery Warmer

Increase Battery Power up to 60% for Cold Engine Starts  
Acid resistant, flexible silicone covered heating pad fits most cars & trucks.

The cranking ability of a battery is reduced by cold temperatures which dramatically reduce the effectiveness of the chemical reaction within the battery and consequently increase a battery's internal resistance. Batteries left in a discharged state can freeze.

Ensure reliable engine start up every time with the use of the THB60 Battery Warmer together with an appropriate TITAN Oil Pan Heater.

Pad size - 8.5" x 5.5"  
120V AC - 60 watts, 0.5 amp  
240V AC - 60 watts, 0.25 amp  
*Not for use in an insulated battery box*
